

## Wisycom Manager v4.2.0 – Release Note

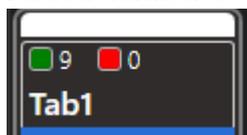

Version 4.2.0 introduces major improvements in stability, device communication, antenna management, frequency calculation, and UI.

### General Improvement

- New graphical control library and revised scene tab layout.
- Added grouping by Tab (Scene)

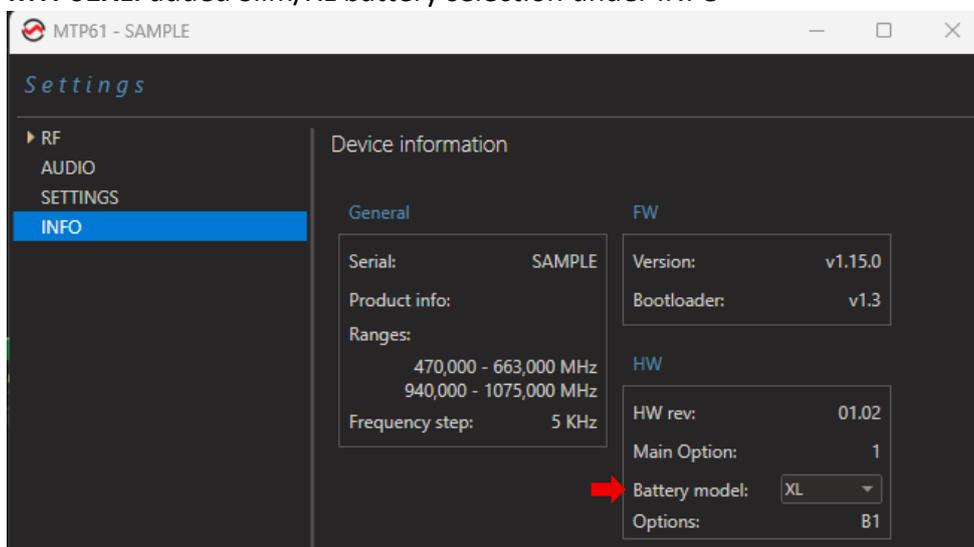

- Added number of devices connected, lost and with active alarms.

### Device Enhancement

- **MTP61XL:** added Slim/XL battery selection under INFO

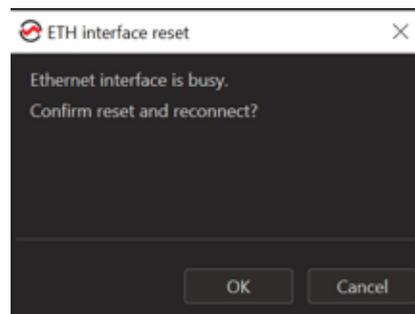

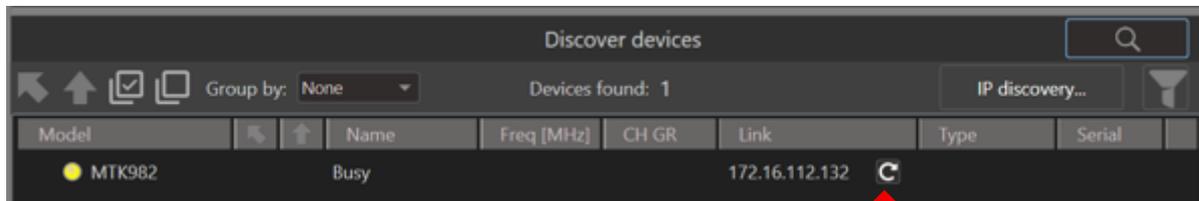

- **MCR54/MCR54-D firmware v2.9.0:** added management of new parameters (Auto Setup, Channel Name, Frequency selection), added MUTE command. See firmware v2.9.0 release note for more details.
- **MRK16:** improved ethernet stability.
- **MRK16-SCA:** fixed issue on scan analyzer measurements (for low levels).
- **MPR52-ENG / MPR51-ENG:** added the ability to assign a name to presets (12 characters), compatible with firmware v1.9.0 for MPR52-ENG, v1.7.0 for MPR51-ENG.
- **MPR60:** added support for the new MPR60 product (firmware update only)

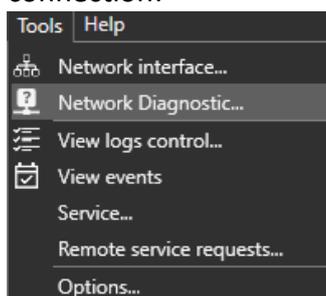

**WISYCOM S.r.l.**

## Communications & Discovery

- More reliable device discovery and connection monitoring.
- Improved handling of devices disappearing from Active area.
- Added Reset command and automatic re-connection when a device is Busy:

- Added Network Diagnostic Tool to check the stability of the network connection:

The system allows you to monitor connection loss statistics, execute ping tests, analyze the response timeout of connected devices and change the response timeout.

We recommend increasing the response timeout in high network traffic conditions to prevent frequent device disconnections.

## Show File Management

- Improved show file load in remote-control environments.

## Firmware Update System

- Fixes LFA antenna upgrade issue.
- Better management of bootloader/application dependencies: Bootloader update package visible only if flag is enabled
